Typical product characteristics:

Slight color and structure deviations between the production batches are unavoidable. Thickening of threads, knots and foreign weft cannot be excluded with woven fabrics. Every flat weave will roughen during use. Depending on the material, a slight streaking effect may occur. Loop pulls are to be expected when hooking with pointed objects or Velcro fasteners. Pilling cannot be avoided and can also be caused by the adhesion of foreign fibers. A certain degree of fading of the colors due to abrasion is inherent in the nature of a fabric. Upholstery fabrics with natural fibers tend to have low light fastness. Light colors show dirt and denim abrasion faster and more clearly than dark colors. In the case of light colors, color migration can occur in combination with dark or intensive color tones. Dark and intensive colors tend to rub off. Upholstery fabrics with natural fibers tend to crease.
