Typical product characteristics:

Slight color and structure deviations between the production batches are unavoidable. Patina and shine spots created during use are characteristic of microfiber fabrics. In regularly used areas, lightening and pile loss may occur. Pile layer changes seat mirrors and slight oscillation are unavoidable. Pilling is unavoidable and can also be caused by the adhesion of foreign fibers. A certain degree of fading of the colors due to the incidence of light lies in the nature of a fabric. Light colors show dirt and denim abrasion faster and more clearly than dark colors. Light colors can cause color migration in combination with dark or intensive color tones. Dark and intensive colors tend to rub off.
